ParcelBI™ Analytics: Your Parcel Data, Simplified

Companies that can identify opportunities to reduce their parcel shipping costs can instantly increase their profitability. The Parcel BI™ analytic tools are designed to quickly expose these opportunities, allowing you to gain better insight into your carrier shipping invoices and costs. These insights can lead to huge savings on both inbound and outbound shipping spend.

- 📦 Single portal for all parcel expenses to be monitored
- 📦 Instantly gain actionable insights & start to make data-supported parcel decisions
- 📦 Easily analyze your freight spend in seconds across multi-attributes
- 📦 Increase Profitability – Immediate exposure to accessorial and extra charges that you may be missing on your invoices or unaware exist
- 📦 Identify refund opportunities that exist in your carrier invoices
- 📦 Period over period performance tracking of inbound & outbound shipments
- 📦 Supports multiple carriers – UPS®, FedEx®, Purolator®, Loomis®, GSO®, OnTrac®, DHL® connectors included (other carriers can be added)

INVOICE ANALYTICS

Empowers you to get a handle on your parcel spend instantly. The reporting platform simplifies the complexity of understanding your parcel spend, allowing for “timely” week-to-week identification of profit improving opportunities. This interactive tool allows you to drill into the data and expose those opportunities and immediately start to improve processes and practices to save money to your company’s bottom line.

CONTRACT EDGE: The “What-if” Comparison tool

Gain the upper hand in contract negotiations with our powerful “What-if” tool that allows you to compare UPS and/or FedEx contracts. Allows you to analyze carrier vs carrier or year-over-year data at a granular level to know where to negotiate the best rates based on your shipping profile.

FREIGHT MARGIN ANALYSIS

Integrating your transactional sales data with ParcelBI™ allows you to see parcel costs associated with individual customers, products and other attributes that will negatively impact profitability. This provides dynamic business intelligence that delivers actionable insights that will drive shipping process & policy improvements.

PARCEL REFUND AUDIT

Carrier invoices can be saturated with errors. This means there’s an opportunity to get money back and reduce your total spend. Parcel BI offers refund services for recovering money on carrier charges by diving deep into your entire parcel landscape, scouring the data for cost savings and opportunities to further reduce your parcel spend moving forward.

ParcelBI™ delivers your data in an interface that is easy to understand and navigate.

The platform allows you to slice and dice reports by carrier, service and customer to identify insights and profit improvement opportunities.
