Profit Engine

Maximize Revenue & Profits

Profit Engine looks beyond traditional financial reporting and is designed to quickly allow you to determine TRUE profitability of each customer and product. Provides unprecedented insight into your fixed, variable and semi-variable cost factors.

Parcel BI

Manage & Reduce Parcel Spend

Vizion360 automates the gathering of parcel carrier invoices and provides analytics for spend management, cost reduction and refund opportunities. Instantly identify costs savings that parcel carriers are NOT highlighting on your invoices.

Impact Portal

Data Hub for Report Delivery & Data Management

Data Management

It is common that companies need an interface to add, edit & delete data existing in a relational database. This requires expensive & time-consuming custom application development. The Impact Portal allows any non-developer to create data management web pages by providing meta-data.

Job Management

The Impact Portal provides a method of defining processes ("Jobs") and exposing a method for users to kick those jobs off. The Impact Portal will define, initiate and control Azure services, SQL and other application processes and provided job monitoring & advanced reporting with notifications.

BI Delivery

The Impact Portal can act as a central web portal for BI delivery. In addition to web delivery, the Impact Portal can deliver reporting via email or network file locations. It also provides a cost- alternative for enterprise SQL Server Reporting Services data-driven subscriptions.

360 Services
