

Developers Best Friend & BI's Preferred Portal Application

The Vizion360 Impact Portal (VIP) is a web-based application that supports three main functions:
Data Management, Job Management & Business Intelligence Delivery.

Impact Portal

Data Hub for Report Delivery & Data Management

Data Management	Job Management	BI Delivery
<p>It is common that organizations need an interface for their users to add, edit, and delete data existing in a relational database. This typically requires expensive and time-consuming custom application development. The Impact Portal allows a non-developer to create data management web pages by providing meta-data.</p>	<p>The Impact Portal provides a method of defining processes ("Jobs") and exposing a method for users to kick those jobs off. The Impact Portal will define, initiate and control Azure services, SQL and other application processes and provided job monitoring and advanced reporting with notifications.</p>	<p>The Impact Portal can act as a central web portal for BI delivery. In addition to web delivery, the Impact Portal can deliver reporting via email or network file locations. It also provides a cost-alternative for enterprise SQL Server Reporting Services data-driven subscriptions.</p>
Data Features Include:	Job Types Include:	Delivery Features Include:
<ul style="list-style-type: none"> ✓ Data validation/formatting ✓ Advanced filtering ✓ Customized Views ✓ Lookup fields: dropdown/type-ahead ✓ Cascading dependencies ✓ Excel import/export ✓ Two different data entry modes (Forms and Datasheet) ✓ Header and detail relationships 	<ul style="list-style-type: none"> ✓ SQL Server Jobs ✓ SQL Server Integration Services (SSIS) packages ✓ SQL Server stored procedures ✓ Azure Data Factory version 2 (ADFv2) pipelines 	<ul style="list-style-type: none"> ✓ Power BI dashboards/reports ✓ SQL Server Reporting Services ✓ Document Libraries for sharing files such as Excel workbooks ✓ Data-driven scheduled refresh & delivery of SSRS reports, Excel or Power BI ✓ Application enables Power BI embedded licensing

Data Management App Designed Specifically for BI Developers

- Three Authentication methods - Windows AD, Azure Active Directory and Forms
- Security Group Support (Active Directory and Azure Active Directory)
- Fine-Grained page level permissions (Create/Read/Update,Delete)
- External page linking capabilities & application embedding support
- Multi-site, Roles, HTML content pages, Audit logging and much more.....
